EF Labs
RE: Senior Web Developer

Dear Hiring Manager,

I was made aware of your job opening for by Danny Li and as a successful, experienced Software Engineer I am confident that I would excel as a Senior Web Developer at EF Labs and am really excited by the opportunity. My background in web development, software design and teaching provide me with the skills to make numerous contributions to EF Labs and my keen interest in linguistics, language learning technologies, web technologies and **people** impart the drive for me to excel.

For the last year I have been based in Korea teaching English while researching technologies required to build software that fills the gap I have seen in Korean language learning tools and in the process written natural language processing software that data mines natural language sentence pairs found throughout the internet for use in a web based spaced repetition learning application. Due to my funds and employment contract coming to an end I'm putting this on hold and have started looking for employment opportunities I believe I will enjoy and EF Labs appears to be such a role.

Prior to that I was working as a Software Engineer at Cyber Technologies, a small UAV startup, in the R&D Software department. My roles here changed often and quickly putting me in contact with most of my fellow staff and many clients. One of the long term tasks I did here was writing the web application that configured our portable servers and UAV's using a combination of Javascript, HTML, CSS, PHP and MySQL. This involved communication among the team to decide best practices, evaluating frameworks, planning and design. During this process I helped identify and automate repetitive testing and deployment tasks for our portable servers. Often during testing I would need to determine if an issue was in hardware, the operating system, the network or software and this was especially true while writing embedded software for in house prototyped hardware. Multi-threading was a key part of my research for CET at UWA and still important for my work at CyberTechnologies where security and encryptions were far more important due to our military clients.

I am very interested in learning more about EF Labs and the Senior Web Designer role. Attached is my resume and a letter of recommendation. If you have any questions, please feel free to contact me at bodey.baker@gmail.com or +82-10-6589-1006. I will follow up with you in a few days to ensure my application has been received and to enquire about scheduling a meeting at your convenience.

Sincerely

Bodey Baker
