To Whom It May Concern:

This is a letter of recommendation for Bodey Baker. Bodey worked at Cyber Technology for 2 years and 5 months as a research and development engineer. He worked on the research and development of an unmanned aerial vehicle autopilot and associated avionics systems. His work included software development in C and Java, web development in PHP and Javascript, electronics debugging and also setting up automated embedded Linux systems. Bodey's performance at the company was outstanding. He was on time, showed initiative, worked hard and was highly productive. I highly recommend him for research and development engineering work.
